

Directional control valve, pilot-operated, with integrated digital axis controller (IAC-Multi-Ethernet)

Type 4WRLD

H8073

- ▶ Sizes 10 ... 35
- ▶ Component series 4X
- ▶ Maximum operating pressure 350 bar
- ▶ Rated flow 60 ... 1500 l/min ($\Delta p = 10$ bar)

Features

- ▶ Open
 - Integrated digital axis control functionality (IAC-Multi-Ethernet)
 - Bus connection/service interface (Sercos, EtherCAT, EtherNet/IP, PROFINET RT, POWERLINK, VARAN)
- ▶ Scalable
 - 2 configurable analog sensor inputs
 - 1 input for linear position measurement system (SSI, 1Vpp or EnDat 2.2)
- ▶ Precise
 - Best-in-class hydraulic controller
 - High response sensitivity and low hysteresis
- ▶ Safe
 - Internal safety function (can be used up to category 4/PL e according to EN 13849-1)
 - CE conformity according to EMC Directive 2014/30/EU

- For information on the "switch-off behavior", refer to Technical data on page 11.
- Symbols V and V1- are not suitable for use in safety applications (no overlap).

Function

General

The pilot-operated **IAC-Multi-Ethernet** valve (Integrated **A**xis **C**ontroller based on directional control valves) is a digital directional control valve with integrated axis controller and the following functionalities:

- ▶ Position control
- ▶ Pressure/force control
- ▶ Closed-loop speed control
- ▶ Alternating control (position - pressure/force)
- ▶ Alternating control (flow - pressure/force)
- ▶ pQ function (flow-controlled)

Among others, the following operating modes are possible:

- ▶ Valve direct control
- ▶ Drive-controlled position control
- ▶ Drive-controlled positioning
- ▶ Positioning block operation
- ▶ The command values are preset via the Ethernet interface (X7E1 or X7E2) or, alternatively, via the analog/digital interface (XH2)
- ▶ The feedback information of the actual value signals to the higher-level control is provided optionally either via the Ethernet interface (X7E1 or X7E2) or the analog/digital interface (XH2)
- ▶ The controller parameters are set via the Ethernet interface (X7E1 or X7E2)

Set-up

The directional control valve with IAC-Multi-Ethernet electronics mainly consists of:

- ▶ Pilot control valve (1) with control spool and sleeve in servo quality
- ▶ Main stage (2) with centering springs and position feedback
- ▶ Integrated digital axis controller (3) with:
 - analog/digital interface (XH2)
 - Ethernet interfaces (X7E1, X7E2)
 - analog sensor interfaces (X2M1, X2M2)
 - digital sensor interface (X8M)
 - interface for the position transducer of the main stage (X8A)

Function

The integrated electronics (OBE) compare the specified command value to the position actual value of the control spool of the main stage. In case of a control deviation, the control solenoid of the pilot control valve is activated and its control spool is adjusted.

The flow which is activated via the control cross-sections at the pilot control valve leads to an adjustment of the control spool of the main valve. The stroke/control cross-section of the main valve is regulated proportionally to the command value. In case of a command value presetting of 0%, the electronics adjust the control spool of the main valve to central position.

The pilot oil supply in the pilot control valve is either internal via port P or external via port X. The feedback can be internal via port T or external via port Y to the tank.

Function

Symbol V and V1-

The control spool of the main valve is not in a safe position after the release is switched off. The enable acknowledgment (pin 3) is not set.

If the supply voltage fails or in case of cable break, the integrated electronics will de-energize the control solenoid, the pilot control spool will move to the fail-safe position and will unload the pilot oil chambers of the main valve. Operated by the spring, the main valve control spool will move to the offset position (approx. 6% P → B/A → T).

Symbol E., W. and Q3-

If the control spool of the main valve is in the covered spring-centered central position, the enable acknowledgment (pin 3) is set. If the control spool of the main valve leaves the covered spring-centered central position or the release is set, the enable acknowledgment expires.

If the supply voltage fails or in case of cable break, the integrated electronics will de-energize the control solenoid, the pilot control spool will move to the fail-safe position and will unload the pilot oil chambers of the main valve. The main valve control spool assumes the covered, spring-centered central position.

Safety function

Thanks to the control solenoids (enable pin 3, low signal) at the connector (XH2), shut-off is enabled.

The control spool of the valve is in spring-centered central position after shut-off (see notes).

Enable acknowledgment pin 8 for solenoid B is "high". When the control solenoid is connected (enable pin 3, high signal), the valve can be regulated in both directions by command value presetting.

Enable acknowledgment pin 8 for solenoid B is "low". The integrated control electronics (OBE) of the valve enables the additional shut-off of a channel according to EN 13849-1 in both directions (depending on the symbol, the valve can be considered as safely shut-off). For this purpose, a suitable control system must be provided to perform the plausibility check between the direction-dependent valve signals "enable input" and "enable acknowledgment" (diagnosis signal fed back by the valve) and to react in an error case. When using symbol V, the valve cannot be used in a safety-relevant manner according to EN 13849-1.

Monitoring

The digital control electronics enable comprehensive monitoring functions/error detection including:

- ▶ Undervoltage
- ▶ Communication error
- ▶ Cable break for analog sensor inputs and digital position measurement system

- ▶ Short-circuit monitoring for analog/digital outputs
- ▶ Monitoring of the microcontroller (watchdog)
- ▶ Temperature of the integrated electronics

IndraWorks DS PC program

To implement the project planning task and to parameterize the IAC-Multi-Ethernet valves, the user may use the IndraWorks DS engineering tool (see accessories):

- ▶ Project planning
- ▶ Parameterization
- ▶ Commissioning
- ▶ Diagnosis
- ▶ Comfortable administration of all data on a PC
- ▶ PC operating systems: Windows XP (SP3), Windows 7-10

Notice:

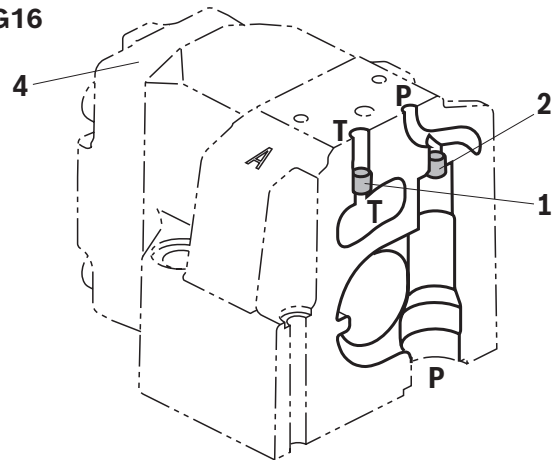

- ▶ Symbol V and V1-: Pilot-operated 4/3 directional control valves are only functional in the active control loop and do not have a locking basic position when deactivated. Consequently, "external check valves" are required in many applications and must be taken into account regarding the switch-on/switch-off order. While the electrical supply voltage is being switched off, the drive may be accelerated for a short time in functional direction P → B.
- ▶ Symbol E. and W.: Pilot-operated 4/3 directional control valves with positive overlap are functional in controlled or regulated axes. The overlap in the de-energized state is approx. 20% of the control spool stroke. While the release is being switched off, the drive may be accelerated for a short time in functional direction P → B. (For further details, please refer to operating instructions 29391-B)
- ▶ 4/3 directional control valves do not have a leakage-free basic locking when deactivated. Leakage must be considered when designing the drive.
- ▶ Valve type 4WRLD can be used as shut-off element of cat. 3 or 4 (up to PL e according to EN 13849-1). For both categories, an additional shut-off element is required to achieve a two-channel shut-off. For further information on the safety application, see operating instructions 29391-B.

Pilot oil supply (schematic illustration)

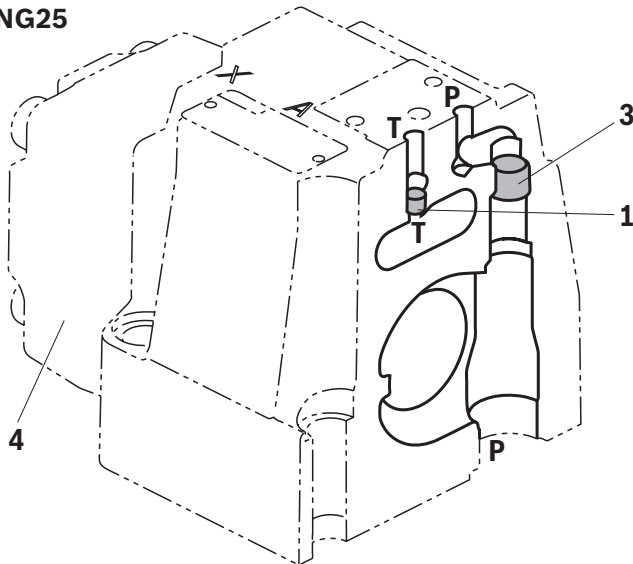

NG10

NG16

internal: **2, 3** open

Pilot oil return

external: **1** closed
internal: **1** open

Further explanations on page 8.

Pilot oil supply

Version "XY"

External pilot oil supply

External pilot oil return

In this version, the pilot oil is supplied from a separate control circuit (external).

The pilot oil return is not directed into channel T of the main valve but is separately directed to the tank via port Y (external).

Version "PY"

Internal pilot oil supply

External pilot oil return

With this version, the pilot oil is supplied from channel P of the main valve (internal).

The pilot oil return is not directed into channel T of the main valve but is separately directed to the tank via port Y (external).

In the subplate, port X is to be closed.

Version "PT"

Internal pilot oil supply

Internal pilot oil return

With this version, the pilot oil is supplied from channel P of the main valve (internal).

The pilot oil is directly returned to channel T of the main valve (internal).

In the subplate, ports X and Y are to be closed.

Version "XT"

External pilot oil supply

Internal pilot oil return

In this version, the pilot oil is supplied from a separate control circuit (external).

The pilot oil is directly returned to channel T of the main valve (internal).

In the subplate, port Y is to be closed.

Notice:

The modification of the pilot oil supply may only be performed by authorized specialists or at the factory. The maximum admissible operating parameters must be observed, see page 10.

		HFDU (ester base)		
		HFDR		
	▶ Containing water	HFC (Fuchs: Hydrotherm 46M, Renosafe 500; Petrofer: Ultra Safe 620; Houghton: Safe 620; Union: Carbide HP5046)	NBR	ISO 12922

Important information on hydraulic fluids:

- ▶ For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- ▶ There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- ▶ The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- ▶ **Bio-degradable and flame-resistant – containing water:**
If components with galvanic zinc coating (e.g., version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves – particularly in connection with local heat input.

▶ Flame-resistant – containing water:

- Due to the increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended – if possible specific to the installation – backing up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.
- Dependent on the hydraulic fluid used, the maximum ambient and hydraulic fluid temperature must not exceed 50 °C. In order to reduce the heat input into the component, the command value profile is to be adjusted for proportional and high-response valves.

3) Only one signal input per interface, configurable

Electrical connections, assignment

Digital sensor interface SSI, EnDat 2.2 or 1Vpp measurement system "X8M", M12, 8-pole, socket

Pin	Assignment		
	SSI ¹⁾	EnDat 2.2 ^{1; 2)}	1Vpp
1	GND	GND	GND
2	+24 V ³⁾	+5 V ³⁾	+5 V ³⁾
3	Data +	Data +	A +
4	Data -	Data -	A -
5	GND	GND	B +
6	Clock -	Clock -	B -
7	Clock +	Clock +	R +
8	+24 V ³⁾	+5 V ³⁾	R -

1) Pins 2, 8 and 1, 5 have the same assignment each

2) Supported resolution ≥ 10 nm

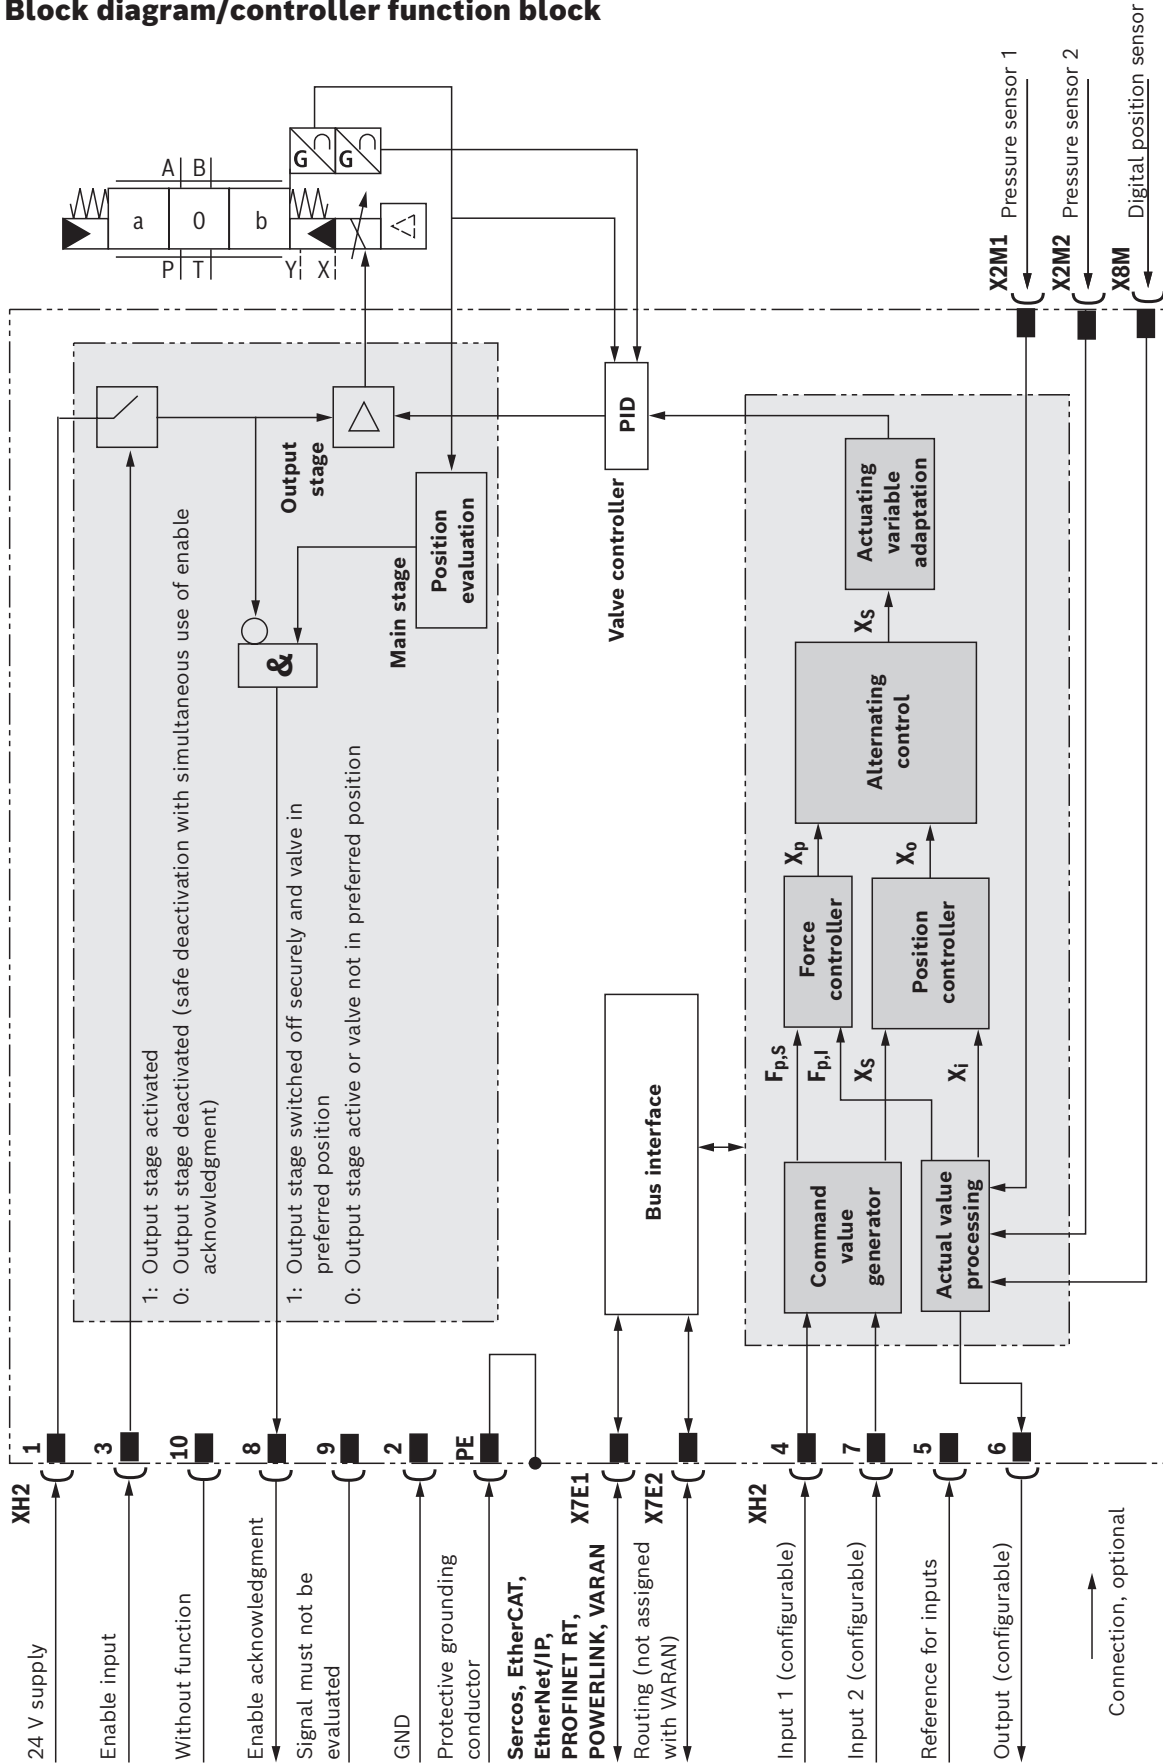

3) A load increases the current consumption of the valve (pin 1 on the connector XH2)

Notice:

- ▶ Reference potential for all signals: GND
- ▶ The shield must be placed on both sides of the metal housing of the plug-in connectors.
- ▶ For a cable length >30 m, an external overvoltage arrester must be provided in the valve voltage supply.

LED displays

LED	Interface	Sercos	EtherNET/IP	EtherCAT	PROFINET RT	POWERLINK	VARAN
1	X7E1	Activity	Activity	Not used	Activity	Not used	Active
2		Link	Link	Link/activity	Link	Link/data activity	Link
3	Electronics module	S	Network status	Network status	Network status	Status/error	Network status
4		Module status	Module status	Module status	Module status	Module status	Module status
5	X7E2	Activity	Activity	Not used	Activity	Not used	not used
6		Link	Link	Link/activity	Link	Link/data activity	not used

Meaning of the status LEDs

Module status LED (LED 4)	Display status
Off	No voltage supply
Green-red, flashing	Initialization
Green, flashing	Drive ready for operation
Green	Drive active
Orange, flashing	Warning
Red, flashing	Error

Network status LED (LED 3)	Display status
Off	No voltage supply
Green	Operation

Activity LED (LED 1 and 5)	Display status
Flashing	Data sent/received

Link LED and Activity LED (LED 2 and 6)	Display status
Permanently lit	Cable plugged in, connection established

Notice:

- ▶ LEDs 1, 2, 5 and 6 relate to interfaces "X7E1" and "X7E2"
- ▶ Module status LEDs 3 and 4 relate to the electronics module
- ▶ For a detailed description of the diagnosis LEDs, please refer to the functional description "Rexroth HydraulicDrive HDx".
- ▶ Function is only available after start-up of the electronics.

4	ASME B18.3 - 3/8-16 UNC x 2 1/4" - ASTM-A574 Tightening torque $M_A = 60 \text{ Nm} [44 \text{ ft-lbs}] \pm 10\%$		
25, 27	6	ISO 4762 - M12 x 60 - 10.9-fZn/nc/480h/C Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$; tightening torque $M_A = 100 \text{ Nm} \pm 20\%$	R913015613
	or		
	6	ISO 4762 - M12 x 60 Friction coefficient $\mu_{\text{total}} = 0.12 \dots 0.17$; tightening torque $M_A = 100 \text{ Nm} \pm 10\%$	Not included in the Rexroth delivery range
	or		
	6	ASME B18.3 - 1/2-13 UNC x 2 1/4" - ASTM-A574 Tightening torque $M_A = 110 \text{ Nm} [81 \text{ ft-lbs}] \pm 10\%$	Not included in the Rexroth delivery range
35	6	ISO 4762 - M20 x 60 - 10.9-fZn/nc/480h/C Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$; tightening torque $M_A = 465 \text{ Nm} \pm 20\%$	R913014726
	or		
	6	ISO 4762 - M20 x 60 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.12 \dots 0.17$; tightening torque $M_A = 610 \text{ Nm} \pm 10\%$	Not included in the Rexroth delivery range
	or		
	6	ASME B18.3 - 3/4-10 UNC x 2 1/4" - ASTM-A574 Tightening torque $M_A = 395 \text{ Nm} [291 \text{ ft-lbs}] \pm 10\%$	Not included in the Rexroth delivery range

Notice:

- ▶ The tightening torque of the hexagon socket head cap screws refers to the maximum operating pressure.
- ▶ Only the valve mounting screws listed here may be used (for size 16, a minimum screw length of 55 mm is admissible, as well).
- ▶ Prior to assembly, check the existing mounting bore on the block for sufficient screw-in depth.

Subplates (separate order) with porting pattern according to ISO 4401, see data sheet 45100.

Accessories (separate order)**Mating connectors and cable sets**

Port	Designation	Version	Short designation	Material number	Data sheet
XH2	Mating connector; for valves with round connector, 11-pole + PE	Metal, shielded	12PN11 ... EMC	R901268000	08006

1) Additional indication of type designation RKB0040/xx.x

2) Additional indication of type designation RKB0044/xx.x

3) Recommendation: Sensor manufacturer Heidenhain when using an EnDat 2.2 sensor.

**Notice:**

- ▶ Tighten the M12 connector with a manual torque wrench by 1 Nm.
- ▶ Self-locking M12 cables must be used.
- ▶ It must be ensured that cables are secured without radial forces.
- ▶ All cables connected to XH2, X7E1 and X7E2 must be bundled in a wire harness after 20 cm at the latest. The wire harness must be fixed after further 20 ... 30 cm. Make sure that there is no relative motion between the fixation and the valve.
- ▶ Before the fixation point, there must not be any cable loops.
- ▶ In general, the information on installation provided by the cable manufacturers must be observed.
- ▶ Respectively, the cables of X2M1, X2M2 and X8M, if used, are also fixed as described above.
- ▶ For further information, see operating instructions 29391-B

Parameterization

The following is required for the parameterization with PC		Material number/download
Commissioning software	IndraWorks, Indraworks D, Indraworks DS	www.boschrexroth.com/IAC
Connection cable, 3 m	Shielded, M12 on RJ45, length can be freely selected (= xx.x)	R911172135 (additional indication of type designation RKB0044/xx.x)

Representation of the axis controller in the system network

Project planning information

- ▶ The supply voltage must be permanently connected; otherwise, bus communication is not possible.
- ▶ If electro-magnetic interference is to be expected, take appropriate measures for ensuring the function (depending on the application, e.g. shielding, filtration).
- ▶ The devices have been tested in the plant and are supplied with default settings.
- ▶ Only complete devices can be repaired. Repaired devices are returned with default settings. User-specific settings will not be applied. The machine end-user will have to retransfer the corresponding user parameters.
- ▶ When replacing component series 3X with 4X, only the valve mounting screws listed in the data sheet may be used. Prior to assembly, check the existing mounting bore on the block for sufficient screw-in depth.
- ▶ The maximum operating pressure of 350 bar at port T is possible with size 35 from component series 43. For component series ≤ 42 , the valve may be operated up to a maximum of 250 bar.
- ▶ Maximum operating pressure of 350 bar at port T only with double flow (supply via ports P and T, discharge via ports A and B; the supply pressure must be kept constant, load pressure in the discharge can be pulsating) without changing the direction of flow.
- ▶ Can be used without restriction up to a maximum operating pressure of 250 bar at port T.
